Stabilization Analyses for Characters

Chris Bentz

14/10/2023

Description

This file enables stabilization analyses for the feature value estimations. In other words, feature values are not estimated for a single, pre-defined number of characters, but are estimated for discrete steps (defined with "stepsize"), and for a given maximum number of characters (defined as "n'').

Load libraries

If the libraries are not installed yet, you need to install them using, for example, the command: install.packages("ggplot2"). For the Hrate package this is different, since it comes from github. The devtools library needs to be installed, and then the install_github() function is used.

```
library(stringr)
library(ggplot2)
library(plyr)
library(entropy)
library(ggExtra)
library(gsubfn)

## Loading required package: proto
# library(devtools)
# install_github("dimalik/Hrate")
library(Hrate)
```

List files

Create list with all the files in the directory "corpus".

Stabilization analysis per file

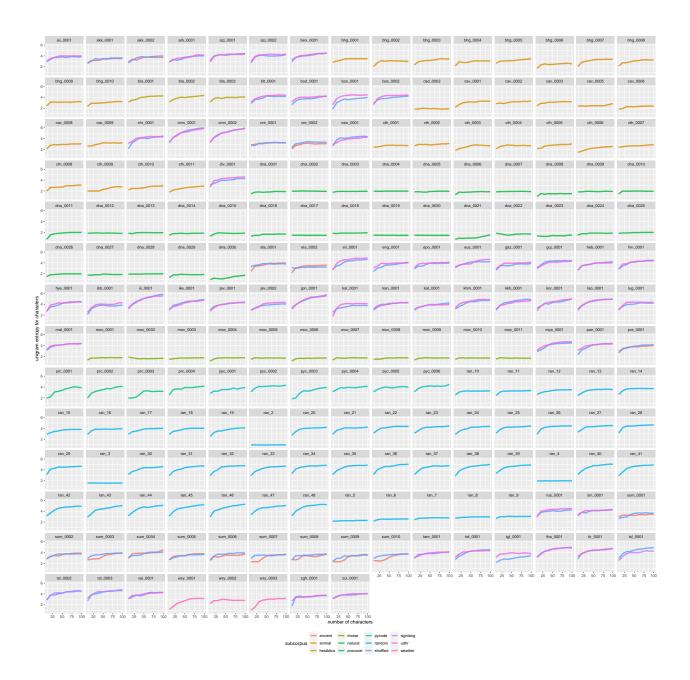

```
# set counter
counter = 0
# set the maximal number of units (n), and the stepsize for stabilization analysis
# (i.e. in steps of how many units are values calculated?)
n = 100
stepsize = 10
# initialize dataframe to append results to
stabilization.df <- data.frame(filename = character(0), subcorpus = character(0),</pre>
                                code = character(0), huni.chars = numeric (0),
                                hrate.chars = numeric(0), ttr.chars = numeric(0),
                                rm.chars = numeric(0), units = numeric(0))
# start time
start_time <- Sys.time()</pre>
for (file in file.list)
